```cpp
#include <iostream>
using namespace std;
struct st {
        char vv1[4];
        long vv2[4];
};
class cl {
        st s;
public:
        cl(char v[]);
        void elab1(int d, st& ss);
        void stampa()
        {
                for (int i = 0; i < 4; i++)
                        cout << (int)s.vv1[i] << ' ';
                cout << '\t';
                for (int i = 0; i < 4; i++)
                        cout << s.vv2[i] << ' ';
                cout << endl;
                cout << endl;
        }
};
```
